***** For Immediate Release *****

netVigilance Inc. announces SOX Safe Scan; regulatory compliance risk assessment for the Sarbanes-Oxley.

Ensure data integrity by preventing tampering or loss due to hackers, virus' and worms.

PORTLAND, Oregon -- March 3, 2006 – netVigilance Inc., an authorized distributor of SecureScout™; advanced Network Vulnerability Assessment and Management software for corporations announced today the release of a test profile; SOX Safe Scan for the popular SecureScout™ line of Network Vulnerability Assessment tools; to address the need for the protection of information assets for Sarbanes-Oxley compliance.

Jesper Jurcenoks; CEO at netVigilance was quoted saying: “With Sarbanes-Oxley, corporate officers are under a great deal of scrutiny and accountability. To sign-off on filings and financial reports; executives must be assured that their data has not been tampered with or lost.”

SOX SafeScan adds to the existing SecureScout scanning policies for GLBA and HIPAA. These pre-configured policies make it very easy to perform frequent and fast Vulnerability Assessment scans to document adherence to regulatory statutes for the protection of sensitive databases.

There is a rising demand for global companies to adopt Sarbanes-Oxley as a benchmark for corporate accountability. Tedi Heriyanto of Quantiq International

Ltd. (web: www.quantigint.com); a major distributor of network security products located in Singapore put it this way: "SOX SafeScan Policy will help organizations to have a better picture of it's overall IT security posture. It also shows the commitment of C-level executives to do the right things for responsible corporate governance."

The Japanese government is currently discussing establishing legislation similar to the US's Sarbanes-Oxley to define accountability for the accuracy of financial reports issued by public companies, internal controls and reliability of audit conducted by an auditing firm.

About netVigilance

Founded in 2003, netVigilance delivers best-in-class solutions for protection of corporate networks. With it's SecureScout™ line of vulnerability assessment tools; netVigilance will ensure increased profitability, increased operational efficiencies, Higher productivity and decreased downtime by increasing the efficiency of network security operations.
